**'a probabilistic theory of extensive measurement**

April 1st, 2020 - algebraic theories for extensive measurement are traditionally framed in terms of a binary relation and a concatenation  $x \cdot y$  for situations in which the data is noisy it is proposed here to consider each expression  $y \cdot x$  as symbolizing an event in a probability space denoting  $p(x \cdot y)$  the probability of such an event two theories are discussed corresponding to the two" ***the theory of probability math10***
